

Vishnuprakash R

Fullstack Engineer

✉ ridvishnu@gmail.com ☎ +91 9080744749 [in linkedin.com/in/awizp](https://www.linkedin.com/in/awizp) github.com/awizp

PROFILE

A Full Stack Engineer with 2+ years of professional experience working in end to end operational environments. Focused on applying structured problem solving and continuously learning AI concepts to integrate into modern software solutions.

PROFESSIONAL EXPERIENCE

Fullstack Engineer

10/2025 – 04/2026 | Chennai, India

CyberDude Networks Private Limited

- Developed full stack applications using structured architecture and business logic.
- Built and integrated REST APIs to handle data flow between client and server.
- Designed and optimized database schemas in noSql for efficient data storage and retrieval.
- Implemented OAuth based authentication and authorization for secure user access control.

Fullstack Developer

01/2025 – 07/2025 | Coimbatore, India

Objectways

- Performed structured validation of API responses by reviewing data accuracy and format consistency.
- Identified data mismatches and logical inconsistencies in system outputs and reported them for correction.
- Contributed to improving data reliability by documenting edge cases and response variations.
- Assisted in quality checks aligned with API based integrations and database records.

Quality Control Engineer

09/2020 – 02/2022 | Coimbatore, India

SE Forge Private Limited

- Performed dimensional inspection of machined components using precision measuring instruments.
- Verified product specifications against engineering drawings and tolerance limits.
- Prepared detailed inspection reports and performed data analysis to support quality decisions and production improvements..
- Reduced rejection rates by detecting defects at early production stages.

EDUCATION

Bachelor of Engineering - Mechanical Engineering

07/2015 – 04/2019 | Chennai, India

Anna University

- Awarded Second Prize for Technical Paper Presentation at Anna University.
- Participated in State Level Technical Symposium presenting engineering concepts and technical ideas.
- Completed Industry Workshop conducted by Nissan Renault focusing on automotive manufacturing practices.

SKILLS

Frontend: HTML, CSS, JavaScript, Bootstrap, Tailwind, SCSS, Redux Toolkit, Next.js, Figma

Backend: Node, Express, REST API, JWT

Database: Mongodb, Mongoose, MySQL

Version Control: Git, Netlify, Vercel, Postman

Engineering Skills: REST API development, API testing and response validation, LLM architecture and workflow, Technical documentation and reportingProcess, Monitoring and defect analysis, Production workflow understanding

PROJECTS

Commercia | E Commerce Web Application [🔗](#)

Engineered a modern web shopping platform featuring dynamic product catalogs and streamlined checkout workflows.

- Designed intuitive frontend interfaces using React to deliver smooth navigation across catalog displays.
- Structured cart management and checkout state to handle item updates and transactions reliably.
- Implemented REST API integration and dynamic rendering to present real time inventory details.

Bookey | Book Discovery and Management Platform [🔗](#)

Developed an interactive web application designed for browsing book collections and managing personal reading lists.

- Built accessible and modular UI components ensuring fluid search and filtering experiences.
- Configured client side data fetching alongside persistent local storage for reading lists and bookmarks.
- Connected external book APIs to dynamically render search results, author bios, and book summaries.

WeTube | YouTube Clone Application [🔗](#)

Engineered a responsive video streaming web application leveraging YouTube Data API v3 with structured state management and dynamic data rendering.

- Developed modular and performant user interface components using React and modern JavaScript.
- Centralized application state management using Redux to efficiently handle video feeds and UI controls.
- Integrated YouTube Data API endpoints to dynamically render search results, video listings, and dedicated watch pages.
